To Whom It May Concern

Subject : Improved Hoof Wall Growth using the “Equine Therapeutic Spa”

As “Second and Third Generation Master Farriers” with 45 years and 20 years experience respectively, positive treatments for various ailments are few, but the “Equine Therapeutic Spa” has provided improvement in hoof wall modeling by providing better growth.

On many occasions slow hoof wall growth frustrates improvement, however, there are many daily factors which determin hoof growth apart from age and physical work, the other major determination in hoof wall growth is peripheral blood flow. The “Equine Therapeutic Spa “ provides hoof wall growth without the use of vesicants (blistering).

Observation of the coronate after the use of the “Equine therapeutic Spa” shows the coronate area protruded, the same effect obtained with blistering.

Where use of the “Equine Therapeutic Spa” has been over (4) weeks, excess hoof wall growth is common place.

The major influence here being peripheral blood flow which is obtained without harming the horse.

Sincerley yours
